SUMMARY

Frontend Engineer (React, React Native, Vue) with 5+ years building complex, data-heavy interfaces — SQL query builders, KPI dashboards, and data visualization — for teams operating in English across the UK and Germany.

EXPERIENCE

ValueWorks.ai

Germany

Frontend Engineer (Part-time)

Sep 2024 – May 2026

- Built and owned an interactive Syncfusion pivot table used on every KPI detail page end-to-end — resolving ~25 tickets, escalating vendor defects to Syncfusion, and fixing a large-dataset performance regression.
- Developed a no-code, Grafana-style SQL query builder (filter, group, order, limit, plus a raw-SQL mode) letting users construct KPI charts without writing SQL, validated against the Go backend.
- Replaced a buggy checkbox-based column filter with a per-column modal and a free-text search bar, both translating user input into SQL filters on a high-traffic list view.
- Consolidated duplicated, bug-prone number/unit-formatting logic (3+ places) into one reusable formatter adopted app-wide, covered with Mocha unit tests, cutting future formatting fixes from days to same-day.

SinanSoft Inc.

Frontend Developer

Oct 2021 – May 2024

- Implemented reusable atomic components (filters, search bars) and core list and form pages for Panorama, a contract lifecycle management app (UK), as one of two frontend engineers on a 6-person early-stage team.
- Created a Lexical-based rich-text editor from scratch, letting admins author customer-facing help content with no developer involvement.
- Led migration of the app's forms from a bug-prone in-house form handler to Formik, and modernized legacy ES4-style code to ES6 with ESLint, cutting form bugs and speeding up delivery.
- Adopted Redux Toolkit Query for API caching, eliminating redundant network requests and reducing perceived page load time.
- Shipped a React Native tennis-court booking app end-to-end, integrating Apple Pay/Google Pay checkout and FCM/Amazon SNS push notifications.

Arashweb LLC.

Frontend Engineer (promoted from Internship)

Jun 2020 – Oct 2021

- Interned on a timer-tracking web app, then converted to full-time as primary frontend contributor — auth, dashboards, drag-and-drop lesson tasks — on a 3-person team building a React Native learning app for young children.
- Owned audio, fill-in-the-gap, and quiz lesson types plus a virtualized avatar-shopping list on a second early-childhood learning app, as one of 4 frontend engineers.
- Developed a restaurant tablet ordering app (item selection, pickup/delivery, live status) largely solo; a teammate added real-time status via sockets.
- Scoped a car-rental app feature and mentored two new interns through implementing it.

EDUCATION

Technische Hochschule Ingolstadt

Ingolstadt, Germany

Master's Degree, AI in Autonomous Systems

Apr 2024

Sadjad University of Technology

Bachelor's Degree, Computer Science

2018 – 2022

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, SQL, HTML/CSS

Frameworks: React, React Native, Vue, Redux, Redux Toolkit Query, Formik, Material UI

Testing & Tooling: Mocha, ESLint, Git, Jenkins (CI/CD)

Other: Data Visualization, Syncfusion, Lexical, Firebase Cloud Messaging, Amazon SNS

Languages Spoken: English (Full Professional), Persian (Native), German (Elementary)
