SUMMARY

Frontend Engineer (React, React Native, Vue) with 5+ years building complex, data-heavy interfaces — SQL query builders, KPI dashboards, and data visualization

EXPERIENCE

ValueWorks.ai

Germany

Frontend Engineer (Part-time)

Sep 2024 – May 2026

- Built and owned an interactive Syncfusion pivot table used — resolving ~25 tickets, escalating vendor defects to Syncfusion, and fixing a large-dataset performance regression.
- Developed a visual, Grafana-style query builder that translates user configurations into SQL, enabling non-technical users to independently construct custom KPI charts.
- Replaced an exhaustive checkbox-based filtering UI with conditional search filters, collaborating with backend engineers on the API contract and drastically reducing payload sizes.
- Refactored duplicated number and unit formatting logic into a centralized utility used app-wide, reducing bug resolution time from days to hours.

SinanSoft Inc.

Frontend Developer

Oct 2021 – May 2024

- Accelerated MVP delivery for an early-stage contract management app by architecting a scalable frontend foundation and reusable component system.
- Engineered a custom Lexical rich-text editor for customer-facing documentation, empowering non-technical admins with code-free, independent content management.
- Modernized legacy frontend architecture by replacing in-house form handlers with Formik and establishing ES6 standards, resulting in fewer bugs and faster release cycles.
- Adopted Redux Toolkit Query for API caching, eliminating redundant network requests and reducing perceived page load time.
- Shipped a React Native booking app, integrating Apple Pay/Google Pay checkout and FCM/Amazon SNS push notifications.

Arashweb LLC.

Frontend Engineer (promoted from Internship)

Jun 2020 – Oct 2021

- Developed foundational React Native features—including secure authentication and gesture-based UIs—to successfully launch an educational mobile app MVP.
- Implemented list virtualization to eliminate scrolling bugs in a media-heavy storefront, and built interactive fill-in-the-gap and quiz features for the core learning loop.
- Engineered a restaurant tablet ordering app from the ground up, implementing the complete frontend user journey from dynamic menu selection to checkout.
- Mentored two engineering interns through the development of a car-rental platform, conducting PR reviews to ensure a stable release.

EDUCATION

Technische Hochschule Ingolstadt

Master's Degree, AI in Autonomous Systems

Ingolstadt, Germany

Apr 2024 – 2026 (Expected)

Sadjad University of Technology

Bachelor's Degree, Computer Science

2018 – 2022

TECHNICAL SKILLS

Languages: JavaScript, TypeScript

Frameworks: React, React Native, Vue, Redux, Redux Toolkit Query, Formik, Material UI

APIs & Data: REST API integration, SQL (query generation), Firebase Cloud Messaging, Amazon SNS

Testing & Tooling: Mocha, ESLint, Git, Node.js scripting, (CI/CD)

Other: Data Visualization, Syncfusion, Lexical

Languages Spoken: English (C1), German (A2)
